

How to Create a Custom AI Template

This guide explains how to create and save your own AI template in the AI Photo Booth software.

Step 1: Enter Edit Mode

Press the P key on your keyboard to enter Edit Mode. A message labeled 'Debug Model' will appear at the bottom of the screen, indicating that edit mode is active.

Step 2: Create a New Template

Left-click anywhere in the editing area. When the menu appears, select Add (instead of Empty) to create a new template.

Step 3: Configure the AI Prompt

Enter your desired AI prompt in the text field. You may refer to the sample prompts provided below as a starting point.

Custom design style

Cue Word:

In the first image, the main character's face should retain its original features, but the image style should be changed to Disney style, with the background being a modern city, a beautiful American girl stands on the street, with long hair, and big eyes.

Words to avoid	1. Avoid using character descriptors such as "a man," "a woman," or "beautiful"—these terms can generate an entirely new person and won't resemble the original individual. 2. Do not include facial feature descriptors, as they will alter the subject's face and make it look unlike the real person. 3. Avoid expressions or demeanor-related prompts (e.g., "smiling," "wide-eyed," "mouth open"), as these will modify the subject's facial appearance and result in an unrecognizable likeness.
Mandatory words	In the first image, the main character's face should retain its original facial features, with only a slight brightening of the skin tone.
Style (optional)	For example, cartoon style, 3D style, astronaut style, Disney style.
Clothing	All individuals are dressed in xxx clothing (with a xx pattern on the clothes), wearing a xx accessory around the waist, a xx hat on the head (with a xx mark on the hat), with hair of xx color, a xx symbol on the forehead, a xx bracelet on the wrist, and xx shoes on the feet.
Background	The background is set in a xxx environment (for example, in space, on a prairie), and includes xxx elements.
Prompt examples	Case 1: In the first image, the main character's face should retain its original features, with only a slight brightening of the skin tone. Everyone is dressed in a white shirt with a blue bow tie around the collar. The lower half consists of blue pants (for males) or a skirt (for females). They are holding a textbook. The background is set under cherry blossom trees on a campus, with sunlight filtering through the leaves and casting light onto the person. Case 2: In the first image, the main character's face should retain its original features, but the image style should be changed to Disney style, with the background being a Disney scene.

Please select style match gender:

unisex

Select the sample image (to test the generation effect, it will reduce the number of corresponding generation)

Note: Each time you generate a template, one AI generation credit will be consumed.

After entering the prompt, click the confirmation button to generate the template.

Step 4: Save the Template

Enter a name for your new template, then click Add style to custom.

Once the process is complete, the software will automatically return to the main interface. Your newly created template will be available under the Custom category.
